## Drive Them Off The Highways

Some time ago it was predicted that with the advent of the warm summer weather which tempts people to enjoy outdoor life as much as possible the newspapers would carry stories of automobile accidents, recording the deaths of some and injury of a great many more.

The prediction is a safe one and is already being amply fulfilled. Even before the hottest summer months arrived a number of accidents with their accompanying fatalities and injuries were reported in screaming headlines in the daily press.

Eye witnesses of an accident in one of the prairie provinces report that a couple of men were driving a brand new car along a crowded highway towards one of the cities on a Sunday evening. With the speedometer recording 75 and 80 miles an hour they flashed past scores of cars laden with men, women and children returning from a day at the summer resorts.

At the speeding car two past other automobiles, some of them travelling at almost equally unreasonable speeds under such traffic conditions, the occupants turned round and waved a derisive "ha, ha", gloating in their ability to "beat the other fellow". The inevitable happened. The driver lost control, or there was a blow out and the two occupants completed their journey to the city in an ambulance, broken limbs and pain-twisted features bearing mute testimony to their agonies. The erstwhile handsome car lay partly on the highway and partly in the ditch wrecked beyond the semblance of a vehicle.

Fortunately in this particular instance the two occupants of the car were the only persons to suffer as a result of their recklessness, but for an hour or more they had jeopardized the lives and limbs of scores, perhaps hundreds of people using the highways in a legitimate and sane manner, including many women and children.

Such recklessness on the highway is nothing less than criminal and those who come to grief as a result of the roads and motor vehicles have only themselves to blame. A worse feature, however, is the menace of such wild driving to other people. Even at moderate speeds 25 and 40 miles an hour the highways are none too safe, but wild speed, crazed individuals at the wheel the roads become potential and sometimes actual shambles.

While the police are on the watch for reckless drivers and do all they can to protect legitimate users of the highways there are not enough of them on the job to ensure complete protection and it is doubtful if the provinces can afford to employ sufficient patrolmen to furnish immunity from all dangerous pests.

Under such circumstances the only safeguard for reasonable people is to arouse public opinion against criminals of this type to the extent that sane drivers will be willing to report to the police and appear in court to testify against them. Such complaints, supported by adequate testimony, should inevitably result in cancellations of drivers' licenses, or at least suspension for a considerable period of time.

After all, the sensible driver, who reports the action of crazy drivers who endanger the lives of others is merely carrying out the law of self-preservation and is doing a public service in the interests of his fellow men and women. No one would hesitate to report a wild man running amuck with a knife or an axe, yet a wild man at the wheel of a powerful automobile is a much greater potential danger to the public.

No person should feel a bit squeamish about reporting dangerous violations of the laws of safety or harbor the notion that because he and his family have been safely passed it is none of his business. If two or three drivers report the recklessness of another their testimony should be ample to ensure conviction. If half a dozen or more report a case, the evidence would undoubtedly be overwhelming.

Not very long ago newspapers reported the organization of a new safety body, the Dominion Automobile Safety Council Inc., with headquarters at Montreal, coupled with the announcement that its chief function is to promote education by means of educational measures designed to cut down the motor car accident toll throughout Canada.

Such an organization can perform a very useful function in society by arousing public opinion and taking in dispassionate the comparative question with which the general public appears to regard a very important question. The proposal that the co-operation of the driving public to report all cases of wild driving on the highways be sought, might well be recommended.

Such drivers should be driven off the highways.

### Not An Ordinary Search

Two Victoria horticulturists have set out on a 3,000-mile trek to look for wild flowers. But it is no ordinary wilderness that attracts Ronald H. and Joseph A. Lebrun to the Arctic and sub-Arctic part of the Yukon and Alaska. Rare snow-berries, poppies and dwarf willows on high in height will be sought during the summer adventure.

The discovery of the earliest known written paper was recently announced. A uniform inscription of about 15 B.C. which has puzzled Syria was in a tablet the earliest known written tablet.

### Long Service Ended

With approximately 140,000 miles behind him, travelled behind a steady plodding horse, Henry Gierich of Baden, Ont. has made his last trip as rural mail carrier after 16 years continuous service over a daily 28-mile route. Only twice in that time did he fail to make his rounds and then he would have been responsible for his time.

For writing one of the world's best sellers, "Black Beauty", the English woman, Anna Sewall, received only \$100. On a straight penny basis, she is the world's best paid author of \$200,000.

## Motor Roads In Britain

Increase In Traffic Is Causing Worry To Authorities

It is said that the British Isles have never been known better than they are today by more of those who inhabit them, and the motor is in view of the means of locomotion available, observes the London correspondent of the New York Sun.

Road traffic has more than doubled in five years. In Great Britain there are 176,000 miles of public highways, of which 43,000 are classified roads. The total number of vehicles using them last year was 2,581,000, as compared with only 872,700 in 1921. One person in every 19 now possesses an automobile. But there are 10,000,000 or more cyclists also using the roads.

According to Hore-Belisha, minister of transport, Britain, in the 20th century, has become the "most densely vehicle" country in the world, having 23 registered motor vehicles to the square mile as compared with seven in the United States. The increase has been so rapid, he contends, that engineers and surveyors have not been able to evolve the means of assuring the free flow of traffic in conditions of safety and order.

In the next five years \$450,000,000 is to be expended on roads, and in that period it is also planned to construct 230 miles of cycle tracks and 730 miles of dual carriageways. Although increased safety for the cyclists will be assured by construction of cycle tracks such as are already widely in use on the continent, many of the cyclists resist the efforts to circumscribe their use of ordinary traffic arteries.

## Japanese Zeppelin Service

Japan May Purchase Two Or More German Dirigibles

Japanese spokesmen of ambitious plans for a trans-Pacific Zeppelin service found themselves faced with serious obstacles. It was learned authoritatively, however, that the plans had not been abandoned.

High aviation sources said one group proposes three routes:

1. An airship service between Tokyo and Hongkong, capital of Manchuria.
2. An airship line connecting Tokyo with Singapore or Batavia, Shanghai and Hong Kong.
3. An aerial route from Tokyo to San Francisco or Los Angeles, via Honolulu and San Diego.

All three schemes call for purchase of two or more German Zeppelins. A German dirigible expert and air pilot called in to explain the German without, so far as could be learned, reaching any agreement with the Japanese interests. The spokesman was informed that Germany could not lend Japan any of her zeppelin experts and pilots except for a very limited time.

## Skeena River Floods

Church Is Wrecked But Bible Left On Table Is Undamaged

The flood waters of the Skeena river wrecked the interior of the March Memorial church at Yale, situated on the river bank, but left the Bible undamaged on a small table. It was revealed in stories brought on from the recently flooded area.

The church organ was overturned, chairs were scattered about the building and the linen cover over the table on which the Bible stood was muddy.

Another story from U.K. concerns a tree here that perched in high branches of a tree.

After the war, the trees were found under the trees where they had established a community nest in which were found four new-laid eggs.

## Original Figure Of Speech

Story Of Jonah Is Mishaken Translation Claims Language Expert

The story of Jonah's three-day stay inside a whale's body, according to data submitted by George M. Lamm of Washington, D.C., is a translation of a mistake in the Aramaic language of Bible times.

"According to the interpretation of dreams in the East, fish or whale means trouble, disturbance and incision. Jonah in the whale is an original hyperbole, and means Jonah is in trouble, just as an American would say, 'he is a hole,' or 'he is out of a hole.' This American slang would be confusing to an Easterner, just as the term 'Jonah in the Whale' would be to a Westerner, unfamiliar with the original speech."

## FORD GETS DEGREE

Millions Of Words Used During Session Of Parliament

During the recent session of parliament, lasting less than five months, members of the House of Commons created approximately 3,240,000 words while sessions were comparatively reticent with little more than 500,000 words recorded by Hansard.

Special committees of the house whose proceedings were recorded used more than 8,000 pages of Hansard. The sessions of the House of Commons used more than 500,000 words of evidence and argument, that which investigated road having the largest volume—about 500,000 words.

Reporting these proceedings and the general activities of the government and the members of parliament, The Canadian Press sent over its automatic printers to its members throughout the Dominion well over 600,000 words.

Probably well over 1,000,000 additional words were sent over the telegraphic wires by the press of special correspondents who are representing individual newspapers in the press gallery. The house of commons was in session 10 days.

## Dame Of St. John

Lady Tweedsmuir Has Been Appointed To Order Of St. John Of Jerusalem

Lady Tweedsmuir has been appointed a dame of grace of the Order of St. John of Jerusalem, the Westminster Gazette announced.

Persons admitted to this order are such persons, being subjects of the British crown, and professing the Christian faith, as have performed or are prepared to perform good services for the order and its objects. The objects of the order are the encouragement and promotion of ambulance, hospital and other charitable work.

The order received a royal charter from Queen Victoria in 1888 as a revival of the military and religious grand prior dissolved by the act of 1801. It was not until 1901 that the king in the sovereign held of the order.

Why, in 1890—only 40 years ago—the total expenditures of the Dominion government, chargeable to consolidated fund, amounted to a "mere" \$28,000,000. At the turn of the century in 1901 the figure was \$40,000,000. And on the eve of the Great War, in 1913, total expenditures amounted to \$112,000,000—or just an even fifty million less than last year's deficit!

Is increased taxation the only remedy?

Is there room for greater economies in these times when every private business—every citizen—must economize?

Have any loop-hole of waste and extravagance been stopped?—Herald.

## SELECTED RECIPES

### BEAN DROP COOKIES

- 1 cup shortening
- 1 cup sugar
- 2 eggs
- 3 tablespoons sour milk
- 1 cup chopped nuts
- 1 teaspoon salt
- 1/2 teaspoon soda
- 1 teaspoon cinnamon
- 1/2 teaspoon cloves
- 2 cups Quaker flour
- 2 cups Quaker Natural Bran

Method: Cream butter, add sugar gradually, the beaten eggs, then milk in which soda has been dissolved and dry ingredients mixed together. Add the nuts broken into quarters. Drop from a teaspoon on buttered baking sheets and bake in moderate oven. Temperature: 350 degrees F.

At its narrowest part, near the Florida Keys, the Gulf Stream is fifty miles wide. Further north, its width reaches 150 miles.

Aviators in the Irish Free State are planning a flight to Australia and possibly around the world.

## Verbose Legislators

Millions Of Words Used During Session Of Parliament

## Speakers Held To Time

Convention Of Health Authorities

Run By Light Signaling System. A system of automatic light signals was used to keep speakers in order at the convention of the Dominion and provincial health authorities of North America held recently in Vancouver.

Five minutes before the scheduled time limit of each speaker a green light flashed on the light-signaling apparatus set on his table. Within one minute to go a yellow light appeared. When a red light came on the speaker was to stop or not he was warned the speaker had to sit down.

As a result of their signal system, the convention authorities were able to run their program on schedule.

## Not Giving Up Flying

Hollick-Kenyon Returns To Pilot's Job After Holiday

Air Commodore Herbert Hollick-Kenyon, Antarctic flyer, isn't quitting flying for farming. The reason he said is that he "has to make a living." By inference he left it that his prospects of doing just as well on an Okanagan fruit farm were not convincing. After a holiday with his wife and children at Ewing's Landing, B.C., he returned to Winnipeg and his pilot's job with Canadian Airways.

The possibilities of using cotton in road building may provide a market for two to three million bales a year.

## Star Explosion

Light Batches Mother Earth After Journey Of 2,000 Years

Old Mother Earth wrenched from a big rest one of the rarest shows since the universe was created—a star explosion that happened long before she was.

Far off in an outer rim of space—so far that the earth and the sun are next door neighbors by comparison—the star "blow up" some 2,000 or 3,000 years ago.

Civilizations rose and fell, but the earth—travelling at 158,000 miles a second—could not give the earth the news of the blast until recently.

Men had suspected for a month that something had happened out there in the Milky Way, for a scientist in Holland had reported that cosmic rays—children of disintegrating matter—had been travelling to earth in greater and greater numbers from that direction.

On the night of June 26th, an amateur astronomer at Delphos, Ohio, in the northwest corner of his telescope and saw a bright star that wasn't there the night before.

It was so bright he could see it through the telescope. It was the boundary line between two constellations, Cepheus and La Ceta, which are in the northwestern sky at sunset and directly overhead in early morning.

At Yerkes observatory of the University of Chicago, Dr. C. D. Struve announced the star had been on astronomical maps since 1893, and had not gotten any brighter by 1930, when its picture was last snapped.

## Yacht To Be Scuttled

Famous Yacht Britannia To Be Sunk In English Channel

The famous royal racing cutter Britannia will be spared the indignity of the shipwreckers' yard and will be scuttled in the English channel.

Official orders for the sinking of the yacht, so closely identified with the late King George, were issued recently. Although it was announced the yacht was being sold, it was to be scuttled.

Britannia was built in 1933 for King Edward VII, when he was Prince of Wales. The famous cutter won 211 first prizes and 139 other awards in 623 races in the course of 43 years of racing.

## Legend Came True

Water Filled Pool In Devonshire When King George Died

The age old legend "And when the pool with water . . ." came true at North Weston, Devonshire, when King George V. died. The legend says that when the spring-fed bath pool there fills with water, a member of the royal family will die. The spring filled just before the death of the Prince Consort, Albert, husband of Queen Victoria, and of Queen Victoria herself and the Duke of Clarence, third son of King Edward VII. Three days after King George V. lay dead, the water vanished and still acts are granting there once more.

## Bird Perchable Bird

Stefan Florida, Mexican consul at Tampa, Florida, has a bird that tells him when it's going to rain, but he wants to get rid of it. The bird is a Mexican road-runner. Its house once in damp weather, it rains, causing it to utter sharp cries before and during rain storms. But the bird disturbs his sleep, he said.

## Monument To King George

A memorial statue to King George V. to be erected near Westminster Abbey is expected to depict the late king in the uniform of an admiral of the fleet.

Have "LEFT-OVERS" with  
People's  
Pretto PACK  
WAXED TISSUE

MORE CONVENIENT TO USE . . .

Just hang a package in your kitchen. You can easily cut with its convenience . . . for, with one hand, you can easily cut a single sheet at a time leaving the other hand free to hold the "left-over" being wrapped.

Warehouses at Calgary, Edmonton, Regina and Winnipeg

## Building For All Insect Parasite Investigations Is Located At Belleville

Write it may be true that the character or methods of insect parasites may seem deceptive, measured by human standards, the fact is that just now in Canada the Entomological Branch of the Dominion Department of Agriculture is hopeful that parasites will help to control some of the most aggravating problems with which the Dominion is presently confronted. So important do the Entomologists regard the parasites that an \$80,000 building has just been built and equipped for the purpose of housing, studying and rearing them in countless numbers. This building stands a little distance back from No. 2 Highway at the eastern entrance to the city of Belleville, Ont. Its modest external appearance might not indicate that it is the most unique and up-to-date building of its kind in the Dominion. It is the centre for all insect parasite investigations and work having to do with the natural and economic control of insect pests in the Dominion. The building, in some measure, is the tangible evidence of years of effort on the part of the Dominion Department of Agriculture and the culmination of the work hoped for by J. H. Rehn, Entomologist, and the Parasite Investigations under whose immediate charge the new Parasite Laboratory will come.

The present Dominion Entomologist, Dr. Arthur Gibson, has encouraged parasite work since his appointment in 1920, and he has done much of the credit for the advance that has been made since that time.

It is effective, all scientific work must make haste slowly. There is no such work as impetuosity in the realm of a scientific investigation. The parasite laboratory at Belleville is an example of this. While the biological method of control has been recognized, and to some extent applied in Canada for many years, it was not until May, 1923, that the first parasite laboratory was established at St. Thomas, Ontario, for parasite investigations.

In 1925, the domestic operations were moved to Chatham in order to be closer to the centre of the corn belt infestation, which was the country of Kent and Essex. Gradually the value of the work began to be more widely recognized and with its wider recognition came some expansion and extension, and another move was decided upon, this time to Belleville. In 1928, the site of the present modern parasite laboratory was bought. On the site of two acres was a fine old three-story house with 20 rooms and some beautiful outbuildings. After a good deal of renovation and the installation of essential equipment Mr. Rehn moved from Chatham with his staff, for by this time he had a modest staff. The acquisition of this property marked a definite step forward.

Results already attained from the work of the Parasite Laboratory have not only paid for the building that has been spent on the work, but what will be spent for years to come. And the work so far is practically only in its infancy. It has been positively established that the work connected with biological control is a very definite phase of economic entomology, necessitating the development of special technique and equipment. At present there are eleven permanent technical assistants employed at the Belleville laboratory, the majority of whom have post graduate training in parasite research, also a number of temporary helpers.

### Growing Egyptian Cotton

Four years ago an uninhabited desert, the valley of the Yabkub river of the Tadjik Republic, 1936 will produce 120,000 acres of Egyptian cotton, according to Soviet plans. Canada have been slow to recognize a total of nearly 60,000 acres to be populated by 30,000 inhabitants.

### Difficult Is Unusual

Some of the folk around Tilbury, Ontario, are wondering if there are flowers or plants in the bottom of Mrs. T. Graham's garden. Last year there was a gladiolus bulb with five perfect spikes of bloom on it. This year there is a penny plant with 121 flowers and buds.

One edition of a large city newspaper will fill a book bigger than the average 362-page novel.

He sure and cheap tires for air at stated periods. It saves wear.

### Value Of Farm Manure

#### One Of Most Efficient Means Of Retaining Soil Fertility

Farm manure naturally constitutes a very valuable by-product on the average farm. This, however, is not always evident. If given proper care, it contains considerable quantities of nitrogen, phosphoric acid and potash in forms which readily become available for plant growth. In addition to the actual plant food contributed, manure also adds humus to the soil, improves its water holding capacity and increases very materially the bacterial life.

In so-called scientific the actual benefit derived from the application of manure in a regular four-year rotation, including oats, barley, clover hay and timothy hay, an experiment was started in 1925 at the Dominion Experimental Station, Kemptville, Ontario. One area was manured at the rate of sixteen tons, divided into two applications. One of eight tons being applied in the fall and the other in the spring. The other area was left unplanted. At the end of a four-year period the percentage increase for the different crops on the manured area was as follows: oats, 45.4; barley, 43.9; clover hay, 78.5; and timothy hay, 115.1. When the increase in yields of the various crops are valued at market prices, the cash return from the manure applied was \$1.65 per ton.

### Might Solve One Problem

#### Good Market For Canadian Cattle Seen In Russia

Russian markets for Canadian cattle might provide one solution to the problem facing the western livestock industry. It has been suggested to Hon. W. D. Fisher, federal minister of trade and commerce.

In a letter forwarded to the federal minister the suggestion was made by Jack Byers, manager of the Western Stock Growers' Association. Mr. Byers said if a contract could be reached to provide Russia with a large quantity of cattle during the present winter year the western markets would benefit immensely. "We have," he stated, "a tremendous surplus of prime steers from the farms and first-class grade cows and heifers from the range country that would certainly suit the trade and market being delivered to the Pacific coast in competition with any country."

### Just State Of Mind

#### Anyone Who Keeps Ideals Will Always Be Young

Youth is a state of mind—it is not a time of life. It is not a matter of ripe cheeks; it is a temper of the will, a quality of the imagination, a vigor. It is a freshness of the deep springs of life.

Nobody grows old by merely living a number of years. People grow old only by deserting their ideals. Worry, doubt, self-distrust, fear and despair—these are the long years that bow the head and turn the growing spirit back to dust.

You are as old as your doubt, as young as your faith; as old as your fear, as young as your self-confidence; as old as your despair, as young as your hope.—United Fruit Paper.

### Will Live On Long

Because he says he cannot "live" ashore on his pension, Major William Reid, retired British army officer, will spend the rest of his life on the ocean. He has booked a permanent passage on the P. and O. liner Harlech, registered in the Bahamas for the service. He has completed his second round voyage on the vessel.

### Italy's Wheat Needs

With the aid of its reserves, Italy's wheat needs will be filled this year. The country's wheat crop is expected to be a record, according to reports of the Italian government, agriculture minister, declared at a meeting of the permanent wheat committee. President Mussolini presided.

### CONQUEROR OF ETHIOPIA ENTHUSIASTICALLY WELCOMED

Marshal Badoglio, Viceroy of Ethiopia, received an enthusiastic welcome when he returned to Italy from Abyssinia. This picture shows Badoglio being acclaimed as he arrived in Naples.

### Salt Makes Good Roads

#### Common Salt, Makes Surface As Hard As Macadam

Common salt when used in surfacing automobile roads made of a clay-and-gravel mixture converts its grains into countless tiny roller workmen who labor incessantly at road repairs.

The discovery of this surprising way in which the salt particles move up and down in the road to keep it moist, smooth, tough and dense has been made public at Cornell University during the celebration of the semi-centennial of Sigma Xi, honorary scientific society.

The salt particles convert a mass of clay, sand and gravel into a surface as hard as macadam. How they accomplish this is a mystery until their workings were studied in the laboratory of Dr. H. Rhea, professor of geology.

Rock salt mixed with the top three inches or more of road, with at least two pounds of salt to the square yard. The mixture is smoothed and sprinkled evenly to dissolve the salt. It is rolled smooth and hard. As the surface dries it "sets" and stays hard. Rain runs off without erosion.

### Prizes For Feeder Shows

#### First Annual Event Being Held In Saskatchewan This Fall

Two thousand dollars in prize money is being offered for the first annual feeder show being held in Saskatchewan, September 28 to October 1, this year. Four classifications of carloads are scheduled for two-year-olds, yearlings and steer calves and butter calves. In each of these classes prize money ranges from \$150 to \$250, five prizes in each class.

These groups of five are also classified with prize money from \$40 to \$15, and there are additional prizes throughout from breeders' associations. It is expected to draw buyers for feeder cattle from Eastern as well as Western Canada and from the United States.

A species of shellfish found in the Indian Ocean produces a low flut-like sound.

### A Haughty Peacock In Humble Stitch

Household Arts by Alice Brooks

Gaily Plunged Bird may Adorn Scarf, Pillow or Chair Set

Pattern 5587

This peacock's both haughty and humble, for his regal bearing is quite simply realized in a bit of easy cross-stitch embroidery. Think what a lot of attention he'll merit, embroidered on a refreshment cloth, chair set, pillow top or scarf! Think what a bit of praise you'll merit, too, for having so charmingly embroidered. Gaily colored dress, please, for his brilliant plumage!

In pattern 5587 you will find a transfer pattern of two motifs 10 1/2 x 13 1/2 inches and two reverse motifs 2 1/2 x 5 1/2 inches; material requirements; color suggestions; illustration of all stitches needed. Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

## Suez Canal Zone Again Centre Of World Interest As In Ages Long Past

### Elmer Goes To Town

#### Seems That The Man On The Farm Must Go To Urban Centre To Find A Wife

There is no need for any woman, let alone a young woman, to remain an "unlabeled treasure" in Canada, the Dominion bureau of statistics said. There are more than enough men to go round.

There is one drawback. Girls in search of husbands must go back to the farms if they want any great number to choose from and less competition. Elmer and the hired men between the ages of 10 and 25, number 108,000, while Maude and the female of the same age number only 95,500.

Country boys have to start to work early. This is one reason a higher percentage of girls from rural communities get high school and college education than do boys with the same background. Girls become school teachers and secretaries and when the time comes for Elmer to choose a wife he has to go to town. What with the chores and all, he doesn't get to the city often even if he does own a car. So he often remains unmarried.

If he goes to college in his own locality, he finds most of the girls getting engaged to older men who find girls of their own age scarce and there are more to be more than two single men in their earlier twenties for every marriageable girl of their age.

When Elmer goes in his gasoline chariot to call on a "city girl" he is almost bound to run into competition from "city fellows" for, on men aged 20 to 25 outnumber women of the same age in cities only by 11,000. In the whole country, almost 400,000 girls are in the date class. Elmer will probably be averse to city life.

Farming is reported one of the most difficult of all occupations for a bachelor and 108,000 Elmers are leaving lonely bachelor lives. If possible, with matrimony in view, to improve their chances, figures indicate they should specialize in milking and butter-making and leave typewriting and school teaching to women with other ambitions.

### Victory For A Tree

#### Owner Alids To Have Ruins Of Egyptian Pyramid

Levels of trees, whose feelings have been outraged on many occasions by the cutting down of trees along streets or highways to make way for improvements planned by people dominated by ideas of strict economy, may now be able to find a good deal of satisfaction and pleasure in a story from the town of Mainz in New York State.

In Mainz lives one C. V. McGregor, distinguished as the owner of a maple tree judged to be 200 years old. The tree towers eighty feet above the roadway and its branches have a spread of sixty feet in diameter. Expert tree men have ventured the prediction that this ancient tree, healthy and strong, may add another century and a half to its span of life if fairly treated and not molested.

Unfortunately for the tree and its owner, it seems to stand dangerously in the path of "progress." When a blue print for a new highway was lately made, it showed the ground to be razed to the ground and be covered with concrete. From an engineering, or blueprint, standpoint the obvious procedure was to clear the tree. The owner disagreed; he held that an opposite procedure was indicated. To his credit he carried the day. The ground for the highway is to be altered and the tree is to stand.

Since the building of smooth highways for automobiles began, countless trees have been sacrificed needlessly. They have often been sacrificed for simple buildings and other improvements. As in this instance, it may sometimes be better and possible to save the tree by the method of raising down a tree—Kington Will-Standard.

### A Peculiar Accident

A horse and an automobile were involved in a peculiar accident at Lindsay, Ont., when this animal was driven too far to one side as the car was passing in the opposite direction. The handle on the car was struck, the horse through the nose and the animal was freed only with much difficulty.

The ancient canal Red Sea, centre of world events for 2,000 years, has been rediscovered by the children of man to Lawrence of Arabia, is again the stage for history-making in the Italian conquest of Ethiopia.

"The titles of history, religion and culture have ebbed and flowed through the Red Sea and the countries along its hot, desert coasts since the earliest times," says the National Geographic Society.

"Moses, on the eastern border, was the first to lead his people, the founder of the Moslem religion whose own counts more than 200,000,000 adherents. To this holy city hundreds of thousands of Mohammedan journey yearly. To the north, the Red Sea, where the Children of Israel wandered on the way to the Promised Land, and Moses received the Ten Commandments."

"To the west is Egypt, seat of one of the oldest cultures in the world, with a history extending back more than 5,000 years, while across the Red Sea in Southern Arabia is the huge Rub al Khali desert, whose vast, unpopulated, and almost entirely unknown to the outside world."

"With the building of the Suez canal, the 1,200-mile length of the Red Sea became one of the world's great commercial highways. British forces, in Egypt on the north and in the Sudan on the south, guard it as an essential link of the trade route to India and the Orient."

"Egypt, most important of the Red Sea's hinterlands, is essentially a vast desert through which runs a narrow strip of fertile land, the Nile valley. Of its 437,480 square miles, only 12,226 are cultivated, but most of this watered area is rich, and irrigated works are enlarging the acreage than can be farmed."

"The Red Sea borders the Red Sea for more than 500 miles, but has no ports of any importance on this coast. In the Arabian desert, between the coast and the Nile, are several mountain ranges, the highest rising more than 7,000 feet. Oil fields are being discovered in the West of the Nile the vast Libyan desert, empty save for about 40,000 people, extends to the Italian colony of Libya."

"Four-fifths of Egypt's 14,168,896 people are of the ancient Egyptian stock, who were the first to build the pyramids. The majority of them are farmers."

"Portugal they grew oranges and lemons. The Nile is building another Delta in the Sudan, with long staple cotton flourishing under the tropical sun. The Sudan has the famous of Khartoum, a Wuzzies, of gum arabic, used to gum postage stamps and envelopes, a large trade in the Sudan, with a sun so bright that railroad car windows are tinted to reduce the glare. Port Sudan and Souakin are the two important ports on the Sudan's coast, dry coast along the Red Sea, extending more than 400 miles from Egypt to Eritrea. They are connected by rail with Khartoum."

### Great Orange Eaters

## TOWN OF REDCLIFF

The Local Tax Arrears  
Consolidation Act

The Council of the Town of Redcliff has passed a By-law declaring that the above Act will be applicable to the Town of Redcliff and said By-law has been approved by the Minister of Municipal Affairs in writing. All consolidated arrears of taxes shall under this Act be payable by five equal annual installments together with the current taxes on or before the 15th day of December except as hereinafter mentioned.

The following persons may make application to the Council to come under the provisions of the above Act.

Any person, firm or corporation who is the owner of any parcel of land in the Town of Redcliff, against the title of which, there is a subsisting notification for arrears under "The Tax Recovery Act 1929."

Any person who has been a bona fide resident of the Town of Redcliff for 12 months immediately preceding the date of his application, in the case of lands which have been finally acquired by the town of Redcliff but not sold, or such persons personal representative.

In such case where the applicant's property is to be exposed for sale at the forthcoming Tax Sale on August 22nd, 1936, such applicants should make their applications in time for the Council to consider same previous to that date.

Upon receipt of the application, the Secretary Treasurer shall calculate the amount required to pay the arrears of taxes, if the same were consolidated, and the applicant shall deposit with the Secretary Treasurer one fifth of such sum.

In such cases where the application to consolidate is made after the 15th day of November 1936, the applicant shall also deposit with the Secretary Treasurer sufficient to pay the current year's taxes.

In any event the current year's taxes shall be paid by the applicant on or before the 15th day of December.

When the application is granted, the deposit shall be applied on the applicant's consolidated arrears, otherwise it shall be repaid to him.

In case the application is not granted, provision is made in said Act for an appeal to the Minister of Municipal Affairs.

The Council may, on the applications in writing of any person liable under a consolidated agreement under this Act and with the approval of the Minister, by resolution, extend that agreement for one year and waive payment of the instalment payable under the agreement for any one year of the years for which such agreement is made, in case it is thought proper so to do by reason of crop failure or other circumstances.

No buildings, fences, fixtures or other improvements shall be removed from any land in respect to which there is a subsisting tax consolidation agreement.

To those who properly come

under the provisions of the above Act, all proceedings under the Tax Recovery Act 1929 are suspended in respect to the properties involved while such consolidation agreement is in force.

## Cash

It was very early in the history of EATON'S that the principle and practice of buying and selling for Cash only was laid down. With certain exceptions we shall mention later, this is still the EATON way of doing business.

Today we still pay cash ourselves for our purchases, because by so doing we are able to buy to the very best advantage. And we confine our selling activities largely to the same reason—because Cash Merchandising offers the customer the lowest possible pricing on whatever she buys.

On certain items of furniture, furnishings and other equipment we do, as a convenience to customers, offer the terms of the EATON Budget Plan. But the Budget Plan prices are higher than the Cash Prices. They have to be, because it does cost more to sell merchandise "On Time." The alternative of paying Cash is always offered, however—and there is always a worth-while saving when you do!

## Long Trip For Black Bass

Game Fish Taken From Georgian Bay To Lake Waukegan

Black bass overtook Prince Albert National Park in Northern Saskatchewan when they were selected their original habitat but 800 broods from the southwestern branch of the house have moved in and taken up life in Lake Waukegan.

They're to be the ancestors of what it is hoped will be a big family of bass and give the park some of the finest sport fishing on the continent. Barren waters in another national park, Jasper park, were transformed into a fishermen's paradise when they were stocked with trout by the Fish Culture Branch of the Dominion Department of Fisheries a few years ago, just as the same branch is now adding bass to Lake Waukegan's fish population.

The fish that went to Lake Waukegan, all of them adults, made the trip to get them on the way from Georgian Bay in Ontario, where they were not under their own power nor of their own intent. They went in their home because federal authorities recognized the desirability of adding good bass fishing to the park and other attractions. The journey in unswerving comfort. They travelled in cots, specially equipped compartments or tanks in a private car of their own, with attendants skilled in fish culture to look after them.

They took the train at Spanish, on North Channel, Georgian Bay, rode at the expense of the Canadian Pacific Railway to Sudbury and then had a free ride from Sudbury to the city of Prince Albert over the lines of the Canadian National. At Prince Albert, they were loaded into water-filled tanks and, all motorized to Lake Waukegan, which lies some 75 miles northward from the city.

Once at the lake most of the bass were set free to follow their own instincts. Others, however, were put into the water at selected spots where enclosures had been built for suitable spawning grounds. Here these fish will be watched by a biologist, Dr. D. S. Rawson, during the June spawning season and for several months after that so that the success of reproduction in the new environment may be gauged, the rate of growth in the young fish, and so on, all for the purpose of making sure that everything is done which experiment suggests. By September it should be fairly well indicated whether or not smallmouth bass will thrive in Waukegan, which is one of the most charming of the many waters in the park.

Of course, stocking wasn't understood on a gambling basis. The lake Waukegan might possibly turn out to be suitable for black bass, but a good deal of the reason for introducing black bass into Prairie Province areas had been successful through some of the fish have got along fairly well in the southern Manitoba waters close to the Ontario boundary, and careful investigations were made by the Waukegan before any decision was reached as to transferring fish. Working under federal supervision, Dr. Rawson, who is professor of biology at the University of Saskatchewan, studied conditions in the lake for several seasons. He found that they were apparently suited to bass.

Then the question came as to how best to handle the work of stocking. The National Parks Branch of the Department of the Interior, which is in charge of Prince Albert National Park, sought the help of the Fish Culture Branch of the Department of Fisheries, which, of course, has had a good deal of experience with questions of this kind. No large stocks of smallmouth bass were available from fisheries under federal administration but through the co-operation of the Ontario Department of Game and Fisheries the Dominion service was able to obtain 200 adult fish from the vicinity of Spanish. While this was being done, the Fish Culture Branch equipped a railway car with a series of large tanks, each capable of carrying about ten bass in temperature-controlled water. The car was then run along to Spanish, the fish were put aboard, and with expert fish culture men along with them to see that they were properly looked after, the bass started off for their new home. The two railway companies co-operated by lending their service free.

The fish were full of life and vim when they began their long trip. All were apparently in the same condition when they reached Lake Waukegan. At all events, they gave away signs of their fatigue as they swam off into the water when the tanks were emptied at lake side.

## THE GERMAN NAVY PUTS ON A SHOW FOR HITLER

### Should Drink More Milk

Average Consumption in Canada Is Much Below Health Requirements. It is still necessary to educate Canadians to drink milk, according to a report compiled from statements of medical health officers in 43 Canadian cities, showing that the average milk consumption is less than one cup and a half per person per day.

As babies, toddlers and growing children should consume at least one quart of milk per day and more than a pint is usually used in coffee or tea for one individual, the average is much below health requirements, it was stated.

"The lower income groups are not using milk as they should," is one of the officials of the department of agriculture said. "In cities in particular the average milk consumption is low and there are still districts where milk is regarded as a luxury and consumption is necessary."

### Pets Are Often Pests

Nitrocellulose Sulphate Will Drive Away Destructive Dogs And Cats. Cats and dogs are generally accepted as pets and friends of man, and so they are in their proper sphere. But neither dog nor cat scratches up the lawn or the choice part of the flower bed is ever looked upon as anything but a pest by the gardener, and a bad pest at that as they cannot be destroyed as such. They have a venerable spot, however, in that neither of them can tolerate the smell of nitrocellulose sulphate. As their sense of smell is much keener than that of human beings, it is possible to use the nitrocellulose sulphate so diluted that flowers, shrubs, buildings, porches, walls and paths are not damaged. The insecticide may be used in weak solution of a tablespoonful to one gallon of water. The spray evaporates in time and rain will wash it away.

### Britains Use Lone Reef

Roast beef—traditional fare of Englishmen—is in danger of losing its supremacy on Great Britain's dining tables. Col. Waley Cohen, well known authority on agriculture, said at Montreal. Fall in the consumption of beef, Col. Cohen explained, resulted because farmers have been advising people to eat less beef and more lamb and chicken.

### No Longer Mythical

Blue Ribbon Of The Atlantic Is Now A Reality

In connection with the maiden voyage of the Queen Mary there has been a good deal written and said lately about the "blue ribbon" or "blue ribbon" of the Atlantic, the reference being, of course, to the honor of the fastest crossing. The term has long been in use. It is used to be the "mythical blue ribbon," for there was no trophy for its holder, no emblem for her to wear. But that is no longer. Just about a year ago both a ribbon and a trophy came into existence. Harold K. Halse, British M.P., and member of a firm of merchants and shippers, presented an elaborate trophy of silver and gilt, called the Halse Blue Ribbon Trophy, for award to the leading ship in this international rivalry on the Atlantic. The trophy was not ready until after the Normandie had become the undisputed holder, but it had been announced some time before. So Mr. Halse presented it first to the Italian liner Rici, previous record holder, to keep for three months. Last November it was turned over to the Normandie.

Under the rules set forth for the trophy a record-breaking ship holds the trophy for three months, at least, regardless of what any rival may do in the meantime. He also flies the ribbon that symbolizes possession of the trophy. — Kingston Whip-Standard.

### Still Full Of Life

Shetland Pony In New Zealand

Passed 46th Birthday. The New Zealand Press Bulletin says her 46th birthday has just been celebrated by Dok, a Shetland pony at Paparua. She still carries youngsters to school, as she has done for five decades for the same family, and is as full of tricks as ever. She cannot be bridled until the would-be rider has "shaken hands" with her. She was bought for £15 by her present owner in 1899, and her pedigree showed her to be then nine years old. She is in excellent condition.

The best way in the world to start a fight is to try reasoning with somebody who knows he is wrong.

Average incomes of \$5,000 or more are made by pilots who handle shipwrecking for the Port of London, Eng.

### Consider The Strawberry

Grower Needs To Think People Not Worthy Of Them

"Did you ever pause to consider how priceless is the boon of the strawberry?" Did it ever occur to you, as you bought a box of them for 10 or 15 cents that Julius Caesar and Alexander and Cyrus and most of the mighty conquerors of the past could not buy a single berry with all their gold and treasure? Did you ever stop in the middle of a mouthful (well squashed) to realize that most of the people of the world will go to bed tonight never having tasted strawberry in their lives?

Did you ever think that if a dozen strawberries grew in the world every year a few American millionaires and princes from India would bid millions of dollars on each single berry and be glad to pay it, while you can buy all you can eat for 25 cents?

And do you think as you commune thus with Nature through the palate how men have labored to produce each berry; how they have dug the soil in the cold wet days of autumn, while you were comfortably indoors, and planted their little strawberry plants, and tended them like children; how they have spread poison against the conquering weevil, and hoed the ground in the cold spring and fertilized it and weeded it and spread straw upon it; and how they have picked the berries under the blistering sun while you were cool and comfortable in the city beside the sea?

In a word, are you really worthy of a strawberry, well squashed? We grow strawberries and labor over them in the cold and the heat, rather doubt it. But probably your money will not be refused.—H. M. in Victoria Times.

### His Idea Of Similar

The pupils in the arithmetic class were having difficulty with the problem in the day's lesson. The teacher said she would work a similar one on the blackboard and explain it. "What do I mean by a 'similar one'?" the teacher asked. After thinking a moment, Roger said: "One like the others only not so hard."

It is easier to make money than to keep it. This also applies to peace.

## English Gardens Restful

Have Seals So Visitors May Enjoy Beauty In Comfort

Mrs. John Carroll Perkins lecturing in Boston on English gardens said that they are amply provided with seats, so unlike America where owners of show places seldom consider that visitors might like to rest awhile and enjoy the garden. The lecturer showed a picture taken in a famous old English garden that had a seat set in a yew hedge, that had been clipped to form a design above the back.

Dwarfed also appear in the gardens of Great Britain. One belonging to Miss Mary Wilson of Rouleau, dates from the 12th century. Topiary work and garden ornaments are also more popular about than here. One enters the garden of Sir Philip Sassoon through a wrought iron gateway that has a design as delicate as lacework.

English is not entirely a garden paradise. It appears, there are garden pests there as elsewhere, the chief of which are slugs.

Gardeners are an impatient and serious folk the world around, but never more than in England. Mr. Perkins told of an elderly Cambridge don displaying his iris, who courteously offered her the use of an opera glass so that she could see the veins of the flowers.

The English like to be able to "retire" their gardens as the pretty old term goes. Mrs. Perkins had for two years a garden at Chipping-Camden. All about the house and around the garden were sweet geraniums, light-blossoming stock, mignonette and other plants with delicate, nothing perfume.

Tucked on one of the trees she saw a faded sign, put there in Victorian times. It read: "This blue-bell must always be kept in bloom for the pleasure of future generations."

### Used Proper Language

Driver Knows What To Say To Uge His Horses

Two women friends of mine (writes a correspondent) were watching with interest a team of horses bringing a heavy load of logs through a wood. The load was very soft and the team stuck fast. The drivers urged their horses forward repeatedly, but without success.

Then one of them advanced to the two ladies and said civilly: "Would you mind going a little farther off? We can't get on here, the horses properly while you're 'ere." The spectators retreated with promptitude out of earshot. Then activity began. The proper language for horses reached them only as distant sound, but they evidently conveyed to the horses the right impression, which one may translate as "Come, old chaps, make a supreme effort, and you'll get your supper tonight, old boys."

Thus incited, the supreme effort was made—the team started up and was heavily laden in a matter of sight. It shows what propriety of language will effect in a crisis.—Manchester Guardian.

### Way To Live Long

Married People Live Longer Say Insurance Companies

Get married and live long seems to be the idea, judging from statistics published by a life insurance company. Not only do married men and women live longer, but they enjoy better health while they live, as compared with bachelors and spinsters. Taking mortality figures in Canada it is shown that the death rate from such causes as influenza, tuberculosis, pneumonia, heart disease, chronic nephritis, ulcer of the stomach, cerebral hemorrhage, alcoholism, suicide and homicide are fewer among the married population. There is one exception, and that is in the case of that baffling distal cancer, fatalism from which are as high in the case of the married as the single. The explanations given are that a married person's life is better ordered, with more regularity in the hours of sleeping, proper meals, recreation, etc.—Hamilton Spectator.

### Should Protect Robins

The Massachusetts State ornithologist said once in our presence that each young fledgling in a robin's nest consumed every day in bug, worms and other food, the equivalent of 14 feet of caterpillars. This means, for a man, about the same thing as eating 60 feet of bologna sausage every 24 hours. One can buy this something of what it means to kill a robin.—Our Dumb Animals.

Headache is a symptom of some disturbance and not a disease itself, says a physician.

## The English Language

Warning Against Letting Our Speech Become Loose

The English language of today is beset by jargon and semi-scientific phrases. Many of these are the members of the Canadian Club at Quebec in a warning against letting our speech become loose, writing because "loose and shapeless."

The governor-general agreed the language was constantly changing but urged his listeners to keep such changes within a fixed limit.

"We must," he said, "always keep a living and organic thing with a strong internal structure. It must never be allowed to become limp or slack."

"It do not mean our writing should be formal and pedantic. What we call a colloquial style may have a very firm structure behind it. But once we forget structure, then the French call ordonnance, then the virtuousness of our speech."

"Take that awful word 'reaction' which is particularly rampant among our friends in the United States. I do not know how many of you have received from America asking what my 'reaction' was to something I observed. I have never heard of the word, but I thought about it. Why could not they say that?"

### King Edward Now Eligible

No Bar To Membership In Royal Yacht Squadron

The King will in August occupy the Admiral's room of the Royal Yacht Squadron, membership of which he was denied as Prince of Wales because he is not King George's strict adherent to Squadron rule. When, by virtue of his accession, he must always be kept in the pleasure of future generations."

For the first time as a member, the King was unanimously elected to invite him to become a member in 1911, when he became Prince of Wales. They sent the Duke of Northumberland to the King to inform him of their decision. To their amazement the Duke, instead of being gratified, turned the proposal down. He said that as the Admiral of the Squadron he could not countenance the breach of the first of its laws—namely, that every member must own a yacht. The Prince did not then own a yacht. He had inherited the Victoria and Albert.

### The Rolling Stone

People Who Move Aimlessly About seldom Accomplish Much

Diligent labor in any honest calling is infinitely more profitable than the aimless hunting for hidden treasures. Those who are given over to the legs poverty, both mental and material, are commonly to be found, not among the men who do best for their daily bread, but among those who spend their time in moving aimlessly about all day long of the way-place, in the hope of some day lighting upon an unearned fortune. That kind of fortune does often turn up; and when it does turn up, it is not usually to the best good of the finder. Half the time and care which some people expend in looking out for great good fortune which never comes, would be enough, if directed into a proper channel, to give them a chief share of the good which they seek in vain. Honest work never fails to pay, and is the only kind of work that does pay.

### What Frightened Him

"I hope you're not nervous, old chap," the taxi told his guest, "but your bedroom is supposed to be haunted."

"Haunted?" exclaimed the guest.

"What by?"

"A wraith—a specter."

"A wraith?"

"A wraith—a specter."

"The guest smiled with relief, and the color returned to his cheeks."

"Oh, that's all right," he exclaimed at last. "At first I thought you said a rale collector."

### Overcome Superstition

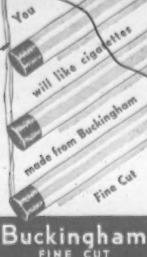

Superstitious natives of Turkey refrained for the first time to shoot at dabbling ducks during the recent cold snap. For years Turks believed during an eclipse the sun was being devoured by a dragon and discharged firearms to frighten the beast away.

Sixty graves in Britain have women superstitious, and 21 brick and pottery places have feminine haunts.

Horses had their tails cut but they didn't stop in front of the girl's house and laugh until she came out.

The "Endeavour II" taking the water at Gosport, England, after being christened by Mrs. T. O. M. Spitham, wife of the famous British yachtsman. Spitham hopes to win the America's Cup with this new boat, and if he can improve his chances over the last America's Cup series, he might do the trick.

## SOPWITH'S NEW CHALLENGER GOES DOWN THE SLIPS

## WORLD HAPPENINGS BRIEFLY TOLD

Sir Cyril Derrvel has been promoted to a post as a successor to Vincent Allenby.

During the calendar year 1928 Canada exported gold to the United States worth \$99,448,280, of which \$2,565,326 was of foreign origin.

The smallest microbe yet known has been discovered in London sewage, only a few millionths of a millimetre in diameter.

Maryse Hill, French aviator, claims the women's altitude record after a flight which she said reached 45,275 feet.

Beginning July 1 public service vehicle drivers in the United Kingdom have been prohibited from speaking to passengers while in motion.

The 20 ships of the Canadian government merchant marine sold some two months ago were disposed of for \$419,920, or \$476 per dead-weight ton.

Councillor D. R. Butler of Derby, England, visiting Toronto, expressed his desire to see more British firms brought to Canada to use "the wealth of the land that is so evident here."

The United States magazine "Asia" was barred from circulating in China by the foreign office which declared the publication contained material unfavorable to the government.

Income tax assessments on Canadians during the year 1929 to 1930 totaled \$4,652,528,800, according to a return tabled in the House of Commons on motion of G. McFicker (Lib., Vancouver-Burrard).

The new Dominion patent laboratory, the only one of its kind in Canada, erected at a cost of \$55,000, was officially opened at Belleville in the presence of many outstanding entomologists of the United States and Canada.

## London's Latest Fad

Pictures Made From Butterflies Wings Are All The Rage

London society's latest fad is pictures made almost entirely from butterfly wings. "Butterfly" the artist has been buying old collections of these wings. He has completed a portrait of Queen Mary in the new medium. The dress consists of 600 butterfly wings, all taken from collections dated as far back as 1865. A striking portrait of Queen Elizabeth, entirely from butterflies caught in the nineteenth century has been bought by the Duchess of York. Subjects that lend themselves especially to this type of art are ships, angel fish, period costumes and coats of arms. Most of the costumes require 1,000 wings.

## Alberta Bird Sanctuary

George Bendick, A Lover Of Birds, Dies At Age Of 79

Known in many parts of Canada as founder of the Bendick bird sanctuary near Edmonton, George Bendick, 79, died at his home in Leduc, forty-four years ago Mr. Bendick and his wife, who survives, lived on the homestead now noted as the Grail Bird game farm where rare birds from many countries are kept. Visitors from all parts of the continent had inspected the farm, one of the show places of the province.

## Wish Of Centennials

On the occasion of her 101st birthday anniversary, Mrs. M. A. Hill, an Englishwoman living in Auckland, New Zealand, received a cable from King Edward: "Wish me I hope to see her many times before I die" was her comment.

## Friendship Of Dog

Many People Consider It A Thing To Be Minded

A teacher in an Eastern city absented herself from her classes a day and a half because of grief over the death of a pet dog. A doctor is quoted as saying that "any teacher who cannot bear up under the sorrow of the death of a dog is in no physical way to teach school."

People who have dogs, or who have lost them, will not all assent to this view. In many homes the dog is a real "person," a member of the family circle, a friend as well as a pet. Some say that affection should not be lavished upon dumb animals, but the fact is that they inspire affection, and give, in return for it, a grateful satisfaction which human beings do not always exhibit.

It is quite possible that a school teacher, losing one of these friends, would, whatever her physical condition, be incapacitated for her duties. Whether the resulting absence should be at her own or the municipality's expense is another matter altogether. But it is a mistake to suppose that the death of a dog will not seriously affect normal people to whom it has been companion and friend.

## Pioneer Navigation

Voyage From England Took Five Months In Early Days

Britain's Cunarder R.M.S. Queen Mary is a long way removed from the "Tweed," the ship by which the first left England about 1800. Mr. Fisher, 78-year-old pioneer to this country, who celebrated his birthday at fall, said:

Seventy-one years ago—two years before Confederation—Mr. Fisher disembarked at Quebec from the four-masted schooner on June 15. The boat had not set sail on January 10, five months and a week before.

During the 71 consecutive years Mr. Fisher has seen a varied life in Canada. A Northwest Rebellion veteran, he saw service in South Africa and enlisted for service in the Great War. He also spent some years with the Mounted Police Force. Only a few years when he was in the ocean, Mr. Fisher recalls vividly the welcome change in diet which Quebec fruit made after five months of salt pork. His seventh birthday two days after landing was a riot of fun amidst a pile of logs on the old wharf. These things stick in his mind, he says.

## The Canadian Nickel

When King's Head Changed Other Side Could Be Improved

While the Bank of Canada, the nature of its notes and the question of the images and supercriptions to be employed on Canadian money are under discussion, we may as well recall a view, from an aesthetic ground, that the first Canadian coin to be altered by the substitution of the head of the present monarch for that of his predecessor should most decidedly be the large nickel. The obverse of this coin in its present design is probably the ugliest and cheapest-looking impression to be found in the entire British Empire. Considering that the coin is made out of one of Canada's most important metal products, and that it is one which we all have to use a great deal, it ought certainly to be a piece of work of which the nation can reasonably feel proud; whereas anybody with any aesthetic sensibilities can possibly feel other than grieved about the present Canadian large nickel. — Toronto Saturday Night.

## Many Divorces

All Divorce Applications Came From Quebec This Year

Divorces granted by parliament this season totalled 40, an increase of 10 over last season. Senator Lord McLean (Cons., Winnipeg) told the senate. All the divorce applications had come from Quebec province, he said.

Divorces were granted this season to 31 husbands and 29 wives.

## A Good Fish Story

As William Jones, fish market proprietor, in Edmonton, opened an 18-inch long pike recently, he found a two-week-old duck in the stomach of the fish. The duck, measuring nine inches from back to feet, was firmly embedded in the stomach and was extracted only with the aid of a butcher's knife. The pike was caught in Birch Lake, 90 miles east of Edmonton.

North Dakota's vast wheat fields have suffered more seriously from drought than wheat in any other state.

## FRENCH CABINET INCLUDES A WOMAN

For the first time in the history of French politics, a woman was given a post in the Government when Leon Blum took office. Above we see Madame Suzanne Lacroix, French Under-secretary of State for Children Welfare, standing beside Premier Blum on the steps at the Elysee, Paris.

For the first time in the history of French politics, a woman was given a post in the Government when Leon Blum took office. Above we see Madame Suzanne Lacroix, French Under-secretary of State for Children Welfare, standing beside Premier Blum on the steps at the Elysee, Paris.

## Solar Eclipse Observations

Radio Impulses Are Reflected To Earth By Sun Radiations

Indications that the earth's electrified roof, which many miles above the surface of the globe, reflects back radio impulses, is formed mostly as a result of ultra-violet sun radiations appeared in preliminary results of the solar eclipse observations.

Prof. Boris Gerasimovich, head of the Soviet cosmic expedition, said he had been informed that indications of a decisive influence of these radiations in the formation of the electrified roof or ionosphere had been obtained in a quick examination of results. He warned, however, that the information still had to be checked.

Prof. K. Kosenich, head of the Soviet expedition at Tsumak, said the Soviet expedition was noticed in the behaviour of the ionosphere beginning 15 minutes before the total eclipse, when the audibility of radio signals was sharply increased.

The new star of the constellation Cepheus was seen clearly by astronomers at Ak Bulak.

## Italian Honored

Dr. Marcello, Inventor Of Wireless, Is Named Royal Admiral

Dr. Guglielmo Marconi, inventor of wireless telegraphy, was named a rear admiral of the Italian navy by Premier Mussolini. Dr. Dore also appointed Baron Pompeo Adelt, Italian delegate to the League of Nations, to the rank of rear admiral. Marshal Benito Mussolini, who commanded the first stages of the Italian campaign against Ethiopia, was made a Chevalier of the Grand Cross of the Military Order of Savoy.

A number of children three years of age have been taught to swim, although four, five and six years are generally better ages.

The cotton ball-weevil is preyed upon by 66 different enemies.

## Crocheted Cape A Chic "Topnote"

A summer's night—stargazing—and your sheers frock call for this lacy capelet, which in turn, calls for crocheted hook and bit in white, pastel or black string. You'll love the soft collar that ties so felicitously round your chin, so buoy—'if you'd enjoy this cape all summer! It will do equally well for a neighborly visit or a more formal occasion. The pattern is a simple one, and you will find complete instructions for making the cape shown, an illustration of it and of all stitches used; material requirements. To obtain this pattern send 10 cents in stamps or coin (cash preferred) to Household Arts Dept., Whiting Newspaper Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

## Cuts Spoilage Costs

New Lethal Lamp Valuable To Packers And Butchers

A lethal lamp whose rays kill kitchen germs that spoil food was demonstrated for the first time at a meeting of the American Institute in New York.

The lamp generates its rays by electricity flowing through a gas-filled bulb. It gives little visible light, is not much warmer than the hand, and generates ultra-violet rays which take but a few seconds to destroy germs.

The rays will kill larger pests, too, up to the size of flies, but take a fairly long time. It was announced that no harmful effects were known on human beings, and that these rays cause no sunburn.

The lamps were shown by Dr. Robert F. James and Dr. Harvey C. Rentschler of the Westinghouse Lamp Co.

"High-bug" meat, the label delicacy made by aging beef until its outside is black, is saved by the rays from half the loss which makes it expensive. This loss is due to kitchen germs which necessitate trimming away 30 per cent. of the meat before serving.

Dr. James said that the rays, used in refrigeration, enable packers to use temperatures 10 to 15 degrees lower, due to the sterilization of the air.

He reported that a baking company had cut its spoilage of cakes from about 15 per cent. average to 1 or 2 per cent. by using the rays to sterilize the surface of the cakes.

Dr. James said that the rays remain fresh for two days instead of one. House flies die if they remain in the rays several minutes.

## To Protect The Public

More Intensive Drive To Radicate Tuberculosis In Urged

A concerted campaign aimed at eradication of tuberculosis was urged by Dr. W. H. Hatfield addressing the members of the Canadian Tuberculosis Association in Vancouver.

More money is spent on police than on nurses. It seems more important to protect the public from bullets than from microbes, although microbes kill more people in a year than bullets ever will," he said.

Meeting at the same time were 20 delegates to the annual meeting of the State and Provincial Health Authorities of North America.

J. J. Hargarty of Ottawa said that quarantine stations could safely be abandoned.

"Ships could be boarded at the wharves, smaller quarantine units could be substituted for present stations. Money saved could be used to safeguard health of the nation in other ways," he said.

Dr. J. G. Townsend, director of health for the United States office leaders from Canada and other Dominion and all parts of the Empire is expected in London for the occasion.

The last regular Imperial conference in London was in 1930. An Imperial economic conference was held at Ottawa in 1932.

Aluminum is more abundant throughout the world than any other metal. It forms about 8 per cent. of the earth's crust.

Used motor oil can now be given in part payment for new, in Germany.

## Wears Colors For Mourning

Adds Ababa Looks Gay But Cause Is Serious

What is the cause of Addis Ababa is a city "gay with mourning." Ordinarily the women of Ethiopia wear only white. Only in cases of death is color worn—pink and green being the most common. Now, owing to the casualties of war and recent disorders, many of the women of Addis are wearing colored dresses beneath their white shawls. Although the cause is sorrowful, the effect is pleasing to the eye.

## Horses Shipped To Scotland

Fourteen stallions of well known blood to Southern Alberta, 52 head of horses, Clydesdales and Percherons, left Calgary for Perth, Scotland. Several prize winners were included in the shipment. The animals brought from \$150 to \$250 a head. Freight and charges destination amount to around another \$100 a head.

"What do you think of Shelley?" asked the highbrow of his friend. "Don't you think he employs too many adjectives?"

"Yes," said the friend, who had no pretension to cleverness. "I think he ought to give Canadian workmen a chance sometimes."

## Great Skill Required

People Who Produce Miniature Marvels Also Have Keen Eye

A new miniature marvel has recently been attracting attention—the world's tiniest clock, whose mechanism is no bigger than a pin nib. The Hungarian who made it, says it runs perfectly. He spent many hours making it out of old bits of metal and wire, and had to discard numerous parts which were vital fractions of an inch.

This ingenious model is an interesting comparison with what was apparently the previous smallest of all trains. Mr. J. Martin, of Walthamston, London, made a miniature engine and chrimsted it Silver Jubilee; he added two coaches and a guard's van, and the whole train measured no more than four inches. This remarkable model was built solely of gold and silver. Its creator, aged 85, inserted mechanism by which the train could travel at a rate equivalent to two and a half miles a year.

For the world's most striking work of art, the artist must turn to Nebraska, United States, where Endel Kuhn has devised an electric train capable of some 500 revolutions a second, but which small enough to rest upon a man's fingernail without oversteering it. Some of the 50 parts are made of gold, and the whole engine, weighing a quarter of an ounce, despite its tiny size, is required to split a bank-note—which is a two-thousandth of an inch thick—in 10. Yet there was necessary change required against a man who did this, and even passed the two halves off as gold, merely getting a few cents for it, too. There has been no other case like it in England.

But there is no doubt that where miniature marvels are concerned, the palm must be handed to Mr. Jules Charbonneau. His exhibition of 24,000 miniature objects in five months ago was the fruit of 50 years' collecting and three trips around the world.

He has the Lord's Prayer engraved on a pin head!

## To Serve The Priests

Milk Condensers Being Built At Red Deer, Alberta

Building has been started at Red Deer, Alberta, of the first milk condenser in the Prairie Provinces. The Central Alberta Dairy Pool, Ltd., is erecting a plant at Red Deer. W. N. Chant, Minister of Agriculture, turned the first sod. It is expected that the condensery will be ready for operation in July. While some of the larger dairies have condensed milk for the local market, the first of its kind in the country is the first dairy in the province to put up evaporated milk for the household trade.

## A Mechanical Watcher

Electric Eyes Can Detect Approach of Enemy Aircraft

Electric "eyes" capable of "seeing" fifty miles away will keep a look-out for the approach of enemy aircraft in the next war. The mechanical watchmen has been invented by a Chicago soldier-scientist, Mr. A. A. Ambrose, who is of German nationality. The "eyes" will pierce fog and smoke screens, it is claimed, and when the enemy's aircraft first comes in sight, the eyes will direct fire on them.

## Had Apple Proof

Doubting recent reports that a centipede swallowed its prey, A. E. Davis and his sons, Jack and Austin, checked up on them when they found one of the insects near Yeas Australia. When they picked it up they had a young centipede half-way down its throat. It swallowed five. The mother was five and one-half inches long and the young ones were an inch long.

## Guarding Beauty Spots

Billboards have been banned from the roads by Royal decree in Belgium. It prohibits them from tourist centers, entrances to villages and certain specified districts, and obligates them to 500 yards from roads, canals and railway lines.

Beats people like a live fire alarm. Little mouse just as much fun over a little trouble as a big one.

**Without Fear****Dr. Favor...**

"I WILL bow to the line of right, let the chips fly where they may." It takes a stout heart to adopt this principle of General Grant's, yet it is the everyday matter-of-course attitude of a good newspaper. No matter whose head rolls in the dust, the truth must be told. No matter what veils of protest and vituperation it brings about its ears, the newspaper prints the news as and where it is found, faithfully and accurately. No malpractice to the public injury is hidden or condoned; no improper policy goes unchallenged. Because the newspaper is the forum and the voice of public opinion. It is the moving picture of daily life where all may see and all may judge freely and independently.

"THE truth, the whole truth and nothing but the truth." As conscientiously as though it were under oath your newspaper gives the plain unvarnished facts. Disagree with its editorials if you will—you have a right to your own opinions—but in the news columns you will find only the news, candid and impartial, on which to base your own judgments.

PRESERVE THE INTEREST AND THE VOICE YOU HAVE IN AFFAIRS AND IN YOUR OWN GOVERNMENT BY READING, AND, AT WILL, USING THE FREE IMPARTIAL COLUMNS OF YOUR NEWSPAPER.
